NOTE: This note is **only** to show your employer/school that you were seen by a physician and/or physician's assistant in evaluation of an acute illness or injury.

Complete days off are provided only for a severe medical illness. The Emergency Department staff cannot decide whether or not you can work due to an injury. If you were assigned "light duty (partial disability)", the note above describes what type of physical activity is limited. Your work supervisor needs to determine if there is light duty available or make other arrangements for you. If you feel a need for additional days in light duty status, you will need to contact and follow up with another clinician as noted in your discharge instructions.

If you feel that you need additional days off due to illness, you will need to contact and follow up with another clinician as noted in your discharge instructions.

The Emergency Department staff does NOT determine total disability due to injury.

Patient Discharge Instructions For LEE, JONG HYUN

Thank you for choosing MedStar Georgetown University Hospital for your health care needs. Our entire staff strives to make your experience in the Emergency Department positive and reassuring. We are committed to providing the very best in safety, quality and service. Within the next few weeks, you may receive a mail, email, or text survey from Press Ganey asking about your experience while you were here. Your feedback helps us identify ways we can better address your needs and continually improve your overall experience. We appreciate you taking the time to participate in the survey and share your feedback about your experience.

If you need assistance finding a physician or scheduling an appointment, please go to **georgetownuniversityhospital.org**. You may either click the blue "Find a Doctor" box, or click the blue "Request an Appointment" box to fill out a form to request an appointment. Please return to the emergency department if

If blood pressure measurement numbers stay above normal (120/80) most of the time, you may have hypertension (high blood pressure). This is a long term (chronic) condition that can lead to serious health problems if not treated.

RISKS RELATED TO HIGH BLOOD PRESSURE

High blood pressure can lead to: **Heart attack, stroke, heart failure, kidney damage, vision problems and memory and concentration problems**

HOW TO MANAGE YOUR BLOOD PRESSURE

Blood pressure can be managed effectively with lifestyle changes and medicines (if needed). Your primary care provider will help you come up with a plan to bring your blood pressure within a normal range.

Please schedule an appointment with your primary care provider within the next 1-2 weeks. If you do not have a primary care doctor, we can refer you to one today.

Discharge Instructions for Patients with Pending Radiology Results

You had radiology imaging as part of your evaluation in the Emergency Department. The Emergency Department doctor or radiology resident caring for you has performed a preliminary interpretation of your image(s). The image(s) will be reviewed by the attending radiologist in the morning and there will be a final report of the findings.

One of three scenarios may occur:

- The attending radiologist will agree with the findings of the Emergency Department doctor or radiology resident
- The attending radiologist might notice something that was not seen by your Emergency Department doctor or the radiology resident and is related to your symptoms
- The attending radiologist might discover something that was not expected and unrelated to your symptoms

Always obtain a copy of your final imaging report to bring to your primary doctor in the event that there are findings that need follow up treatment, imaging, or subsequent monitoring. We will attempt to contact you by phone if there are any abnormal findings that need attention. If we are unable to reach you, we will send a letter by mail. You can also obtain a copy of your imaging report within your myMedstar Portal. If you are unable to obtain your results within 7 days, please contact the Medical Records department at the hospital in which you were treated.

A peritonsillar abscess is a collection of pus in the back of the throat, behind the tonsils. It usually occurs when an infection of the throat or tonsils (tonsillitis) spreads into the tissues around the tonsils.

What are the causes?

The infection that leads to a peritonsillar abscess is usually caused by streptococcal bacteria.

What increases the risk?

You are more likely to develop this condition if:

- You have recently been diagnosed with an infection in your mouth or throat.
- You smoke.
- You have gum disease or gingivitis (periodontal disease).

What are the signs or symptoms?

Early symptoms of this condition include:

- Fever and chills.
- A sore throat, often with pain on just one side.
- Swollen, tender glands (lymph nodes) in the neck.

Patient Viewable Documents

- Headache.

As the infection gets worse, symptoms may include:

- Difficulty swallowing.
- Drooling because of difficulty swallowing saliva.
- Difficulty opening your mouth.
- Bad breath.
- Changes in how the voice sounds.

How is this diagnosed?

This condition may be diagnosed based on:

- Your symptoms and medical history.
- A physical exam.
- Imaging tests, such as ultrasound or CT scan.
- Testing a pus sample from the abscess. Your health care provider may collect a pus sample by swabbing the back of your throat or by removing some pus with a syringe and needle (needle aspiration).

How is this treated?

Treatment usually involves draining the pus from the abscess. This may be done through needle aspiration or by making an incision in the abscess and draining the fluid. You will also likely need to take antibiotic medicine.

Follow these instructions at home:

Medicines

- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you were prescribed an antibiotic, take it as told by your health care provider. **Do not** stop taking the antibiotic even if you start to feel better.

Eating and drinking

- Drink enough fluid to keep your urine pale yellow.
- While your throat is sore, try only drinking liquids or eating only soft-textured foods such as yogurt and ice cream.

Activity

- Rest as told by your health care provider.
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.

General Instructions

- If your abscess was drained, gargle with a mixture of salt and water 3–4 times a day or as needed.
—~~4~~**To** make salt water, completely dissolve $\frac{1}{2}$ –1 tsp (3–6 g) of salt in 1 cup (237 mL) of warm water.
—~~4~~**Do not** swallow this mixture.
- **Do not** use any products that contain nicotine or tobacco. These products include cigarettes, chewing tobacco, and vaping devices, such as e-cigarettes. If you need help quitting, ask your health care provider.
- Keep all follow-up visits. This is important.

Contact a health care provider if:

- You have more pain, swelling, redness, or pus in your throat.
- You have a headache.
- You have a lack of energy (lethargy) or feel generally sick.
- You have a fever or chills.

FIN: GUH-07731762576

DOB/Age/Sex: 6/1/1993 32 years

Date of Service: 5/24/2024

Attending Provider: Rahman,MD,Sabrina

Male

Patient Viewable Documents

- You have trouble swallowing or eating.
- You have signs of dehydration, such as:
 - 46ight-headedness or dizziness when standing.
 - 46rinating less than usual.
 - 46 fast heart rate.
 - 46ry mouth.

Get help right away if:

- You are unable to swallow.
- You have trouble breathing, or it is easier for you to breathe when you lean forward.
- You cough up blood or vomit blood after treatment.
- You have severe throat pain that does not get better with medicine.

These symptoms may represent a serious problem that is an emergency. Do not wait to see if the symptoms will go away. Get medical help right away. Call your local emergency services (911 in the U.S.). Do not drive yourself to the hospital.

Summary

- A peritonsillar abscess is a collection of pus in the back of the throat. It usually occurs when an infection of the throat or tonsils spreads to surrounding tissues.
- Symptoms include a sore throat, difficulty swallowing, fever, chills, and occasional drooling.
- This condition is treated by draining the abscess and taking antibiotic medicine.
- Call your health care provider if you have trouble swallowing or eating after treatment.
- Get help right away if you vomit blood or cough up blood after treatment.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.
