### Work/School Note

To whom it may concern:

This certifies that YOSHIMOTO, AYAE was a patient in the MedStar Georgetown University Hospital Emergency Department from 05/27/24 11:28:00 until 05/27/24 14:53:23

**NOTE:** This note is **only** to show your employer/school that you were seen by a physician and/or physician's assistant in evaluation of an acute illness or injury.

Complete days off are provided only for a severe medical illness. The Emergency Department staff cannot decide whether or not you can work due to an injury. If you were assigned "light duty (partial disability)", the note above describes what type of physical activity is limited. Your work supervisor needs to determine if there is light duty available or make other arrangements for you. If you feel a need for additional days in light duty status, you will need to contact and follow up with another clinician as noted in your discharge instructions.

If you feel that you need additional days off due to illness, you will need to contact and follow up with another clinician as noted in your discharge instructions.

The Emergency Department staff does NOT determine total disability due to injury.

### Patient Discharge Instructions For YOSHIMOTO, AYAE

Thank you for choosing MedStar Georgetown University Hospital for your health care needs. Our entire staff strives to make your experience in the Emergency Department positive and reassuring. We are committed to providing the very best in safety, quality and service. Within the next few weeks, you may receive a mail, email, or text survey from Press Ganey asking about your experience while you were here. Your feedback helps us identify ways we can better address your needs and continually improve your overall experience. We appreciate you taking the time to participate in the survey and share your feedback about your experience.

If you need assistance finding a physician or scheduling an appointment, please go to **[georgetownuniversityhospital.org](http://georgetownuniversityhospital.org)**. You may either click the blue "Find a Doctor" box, or click the blue "Request an Appointment" box to fill out a form to request an appointment. Please return to the emergency department if worsening symptoms or pain, trouble breathing, or any other concerns. The following includes patient education materials and information regarding your injury or illness.

**Want to say thank you to your nurse? Share your story of compassionate and skillful nursing care. Scan the QR code from your smart phone or email your Daisy nomination to [Jasmine.A.Barnes@medstar.net](mailto:Jasmine.A.Barnes@medstar.net)**

convenient, streamlined resources to help you better manage your health. We now offer the ability for you to securely connect some of the health management apps you may use(i.e. fitness trackers, dietary trackers, etc.) to your health record. Email us at [mymedstar@medstar.net](mailto:mymedstar@medstar.net) if you are interested. Once we receive your request, MedStar Health will work with the appropriate vendors to determine if they meet the technical requirements in order to establish a secure connection.

If you have questions or need assistance creating your account, please contact myMedStar support toll free at 1-877-745-5656, 24 hours a day, 7 days a week.

**You have some rednes to the lower eyelid which resembles a sty. If you notice significant redness, increased swelling, drainage, or vision changes, please return to the ED**

## **Stye**

A sty, also known as a hordeolum, is a bump that forms on an eyelid. It may look like a pimple next to the eyelash. A sty can form inside the eyelid (internal sty) or outside the eyelid (external sty). A sty can cause redness, swelling, and pain on the eyelid.

Styes are very common. Anyone can get them at any age. They usually occur in just one eye at a time, but you may have more than one in either eye.

### **What are the causes?**

A sty is caused by an infection. The infection is almost always caused by bacteria called *Staphylococcus aureus*. This is a common type of bacteria that lives on the skin.

Female

### ***Patient Viewable Documents***

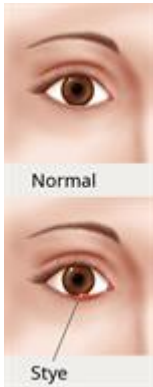

An internal styte may result from an infected oil-producing gland inside the eyelid. An external styte may be caused by an infection at the base of the eyelash (hair follicle).

### **What increases the risk?**

You are more likely to develop a styte if:

- You have had a styte before.
- You have any of these conditions:
  - Red, itchy, inflamed eyelids (blepharitis).
  - A skin condition such as seborrheic dermatitis or rosacea.
  - High fat levels in your blood (lipids).
  - Dry eyes.

### **What are the signs or symptoms?**

The most common symptom of a styte is eyelid pain. Internal stytes are more painful than external stytes. Other symptoms may include:

- Painful swelling of your eyelid.
- A scratchy feeling in your eye.
- Tearing and redness of your eye.
- A pimple-like bump on the edge of the eyelid.

- Pus draining from the sty.

### How is this diagnosed?

Your health care provider may be able to diagnose a sty just by examining your eye. The health care provider may also check to make sure:

- You do not have a fever or other signs of a more serious infection.
- The infection has not spread to other parts of your eye or areas around your eye.

### How is this treated?

Most styes will clear up in a few days without treatment or with warm compresses applied to the area. You may need to use antibiotic drops or ointment to treat an infection. Sometimes, steroid drops or ointment are used in addition to antibiotics.

In some cases, your health care provider may give you a small steroid injection in the eyelid.

If your sty does not heal with routine treatment, your health care provider may drain pus from the sty using a thin blade or needle. This may be done if the sty is large, causing a lot of pain, or affecting your vision.

### Follow these instructions at home:

- If you were prescribed an antibiotic medicine, steroid medicine, or both, apply or use them as told by your health care provider. **Do not** stop using the medicine even if your condition improves.
- Apply a warm, wet cloth (warm compress) to your eye for 5–10 minutes, 4 to 6 times a day.
- Clean the affected eyelid as directed by your health care provider.
- **Do not** wear contact lenses or eye makeup until your sty has healed and your health care provider says that it is safe.
- **Do not** try to pop or drain the sty.
- **Do not** rub your eye.

### Contact a health care provider if:

- You have chills or a fever.

### ***Patient Viewable Documents***

#### **What are the causes?**

This condition is caused by a reaction in your body's defense system. The system sees a medicine as being harmful when it is not.

#### **What are the signs or symptoms?**

##### **Symptoms of a mild reaction**

- A stuffy nose.
- Tingling in your mouth.
- An itchy, red rash.

##### **Symptoms of a very bad reaction**

- Swelling of your eyes, lips, face, tongue, mouth or back of your throat.
- Itchy, red, swollen areas of skin.
- Feeling dizzy or light-headed.
- Feeling mixed up.
- Pain in your belly.
- Trouble with breathing, talking, or swallowing.
- A tight feeling in your chest.
- Fast heartbeat.
- Vomiting or watery poop (diarrhea).

#### **How is this treated?**

There is no cure for allergies. An allergic reaction can be treated with:

- Medicines to help your symptoms.
- Medicines that you breathe into your lungs (respiratory inhalers).
- A shot for a very bad allergic reaction (epinephrine).

Female

### ***Patient Viewable Documents***

For a very bad reaction, you may need to stay in the hospital. Your doctor may teach you how to use an allergy kit and how to give yourself an allergy shot. You can give yourself an allergy shot with what is called an auto-injector "pen."

### **Follow these instructions at home:**

#### **If you have a very bad allergy:**

- Always keep an allergy pen or your kit with you. This could save your life. Use it as told by your doctor.
- Make sure that you, the people who live with you, and your employer know how to use your allergy pen or kit.
- If you used your allergy pen or kit:
  - ~~4~~Get more medicine for it right away. This is important in case you have another reaction.
  - ~~4~~Get help right away.
- Wear a medical alert bracelet or necklace that says you have an allergy, if your doctor tells you to do this.

### **General instructions**

- Avoid medicines that you are allergic to.
- Take over-the-counter and prescription medicines only as told by your doctor.
- If you were given allergy medicines, **do not** drive until your health care provider tells you it is safe.
- If you have hives or a rash:
  - ~~4~~Use over-the-counter medicines as told by your doctor.
  - ~~4~~Put cold, wet cloths on your skin.
  - ~~4~~Take baths or showers in cool water. Avoid hot water.
