**Chief Complaint**As per Triage RN:

Pt reports adverse reaction to 200mg ibuprofen taken last night at 1700. Pt describes scant "mucous" from R eye and itchiness to R eye and R nostril; symptoms resolving w/o intervention. Pt had similar reaction to taking aspirin in her past.

Arrived From for ED: Home

Lines or Tubes Present on Admission: None

**History of Present Illness**

29 year old female w/no PMHX who presents for evaluation for R eye itchiness and drainage since last night. States this started after taking 200 mg ibuprofen last night at 1700. Has taken ibuprofen in the past without issues. Patient states similar symptoms happened a few years ago after taking aspirin. Symptoms improving. No drainage or discharge at this time. Notes some tenderness to lower eyelid. No visual changes.

**Relevant Social Determinants of Health**

My ability to evaluate or manage the patient during this ED visit was directly affected by the following social determinant(s) of health:

☒ [X] None known at this time☐ [ ] impaired literacy/health literacy☐ [ ] English not primary language☐ [ ] lack of primary care provider or transportation/accessibility to healthcare☐ [ ] employment instability☐ [ ] housing instability**Allergies**

aspirin

ibuprofen

#### **Physical Exam**

##### **Vitals:**

##### **Initial Vitals**

**T:** 37.1 degC (Oral) **HR:** 89 (Peripheral) **RR:** 16 **BP:** 113/74 (Automated) **SpO2:** 97%

Oxygen Delivery Device: Room Air

**General:** No acute distress, well developed

**Eyes:** Opens eyes spontaneously, no conjunctival injection, small area of erytema along lower lash lid, no discharge

**HENT:** Normocephalic, atraumatic, neck is supple with full ROM

**Resp:** No respiratory distress, spontaneous respirations

**CV:** Clinically well perfused, regular rate and rhythm

**GI:** Soft, non-distended, no tenderness to palpation

**MSK:** No gross deformities appreciated, moves all extremities spontaneously

**Neuro:** Alert, awake, oriented to person, place, and time. Face symmetric, speech clear

**Skin:** Warm, dry, no rashes

**Psych:** Appropriate mood and affect

#### **Assessment and Plan/Medical Decision Making**

29-year-old female presenting with adverse drug reaction and right eye discharge and itchiness. Exam suggestive of stye. Low suspicion for true allergic reaction as symptoms were isolated to R eye only. No rash, N/V, abdominal pain after taking ibuprofen and patient has taken ibuprofen in the past without issues. However, patient advised to avoid taking ibuprofen. Provided information for stye care and given return precautions. Patient verbalized understanding. Questions and concerns addressed. Patient stable for discharge

#### **Impression/Disposition**

##### **ED Diagnosis:**

**Adverse drug interaction| (T50.905A)**

**Redness of right eye| (H57.89)**

##### **Patient Disposition**
